**Question 1** | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
      printf("*");
    }
    else
    {
     for(int i=1; i<=n; i++)
     {
       for(int j=1; j<=n; j++)
       {
          printf("*");
          printf("*");
          break;
       }
     }
   }
 }
```

**Note:** No need of counter increment for declarations and scanf() and count variable printf() statements.

**Input:**

A positive Integer n

**Output:**

Print the value of the counter variable

**Answer:** (penalty regime: 0 %)

Reset answer

```
#include<stdio.h>
int main() {
    int n;
    scanf("%d",&n);
    int c =0;
    if(n==1){
        c++;
        //printf("*");
    }
    else
    {
        for(int i=1;i<=n;i++)
    {
        c++;
        for(int j=1;j<=n;j++){
            c++;
            c++;
            c++;
            break;
        }
    c++;
   }
c++;
}
c++;
printf("%d",c);
}
```
