Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
void reverse(int n)
{
   int rev = 0, remainder;
   while (n != 0)
    {
        remainder = n % 10;
        rev = rev * 10 + remainder;
        n/= 10;

    }
print(rev);
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

Reset answer

```
1  #include<stdio.h>
2  void reverse(int n)
3  {
4      int rev=0,remainder;
5      int c=0;
6      c++;
7      while (n!=0)
8      {
9          c++;
10         remainder=n%10;
11         c++;
12         rev = rev*10+remainder;
13         c++;
14         n/=10;
15         c++;
16     }
17     c++;
18     c++;
19     printf("%d",c);
20
21     }
22     int main()
23     {
24         int n;
25         scanf("%d",&n);
26         reverse(n);
27         return 0;
28
29 }
```

	Input	Expected	Got
